MACH 1

PORTABLE MAGNETIC OXY + PLASMA CNC

Designed for portability & versatility, this cutting system delivers reliable, powerful performance in a compact, field-ready setup.

Weighing just 20 pounds with a 68" diameter reach, the unit is easy to transport and deploy, complete with a durable hard carrying case for demanding site conditions. Its magnetic mounting system allows for flat, horizontal and overhead applications, making it ideal for plates, beams and heavy equipment. The fully interchangeable oxy and plasma cutting attachments provide flexibility across different cutting requirements, with the ability to connect directly to gas bottles or CNC plasma cutters.

SMART CNC SYSTEM

The integrated CNC functionality includes a touchscreen tablet with lifetime software updates, enabling operators to trace point-to-point, import CAD files or work from preloaded shapes for accurate and efficient cutting performance across a wide range of applications.

Designed and Assembled in the USA

SITE APPLICATIONS

EQUIPMENT APPLICATION

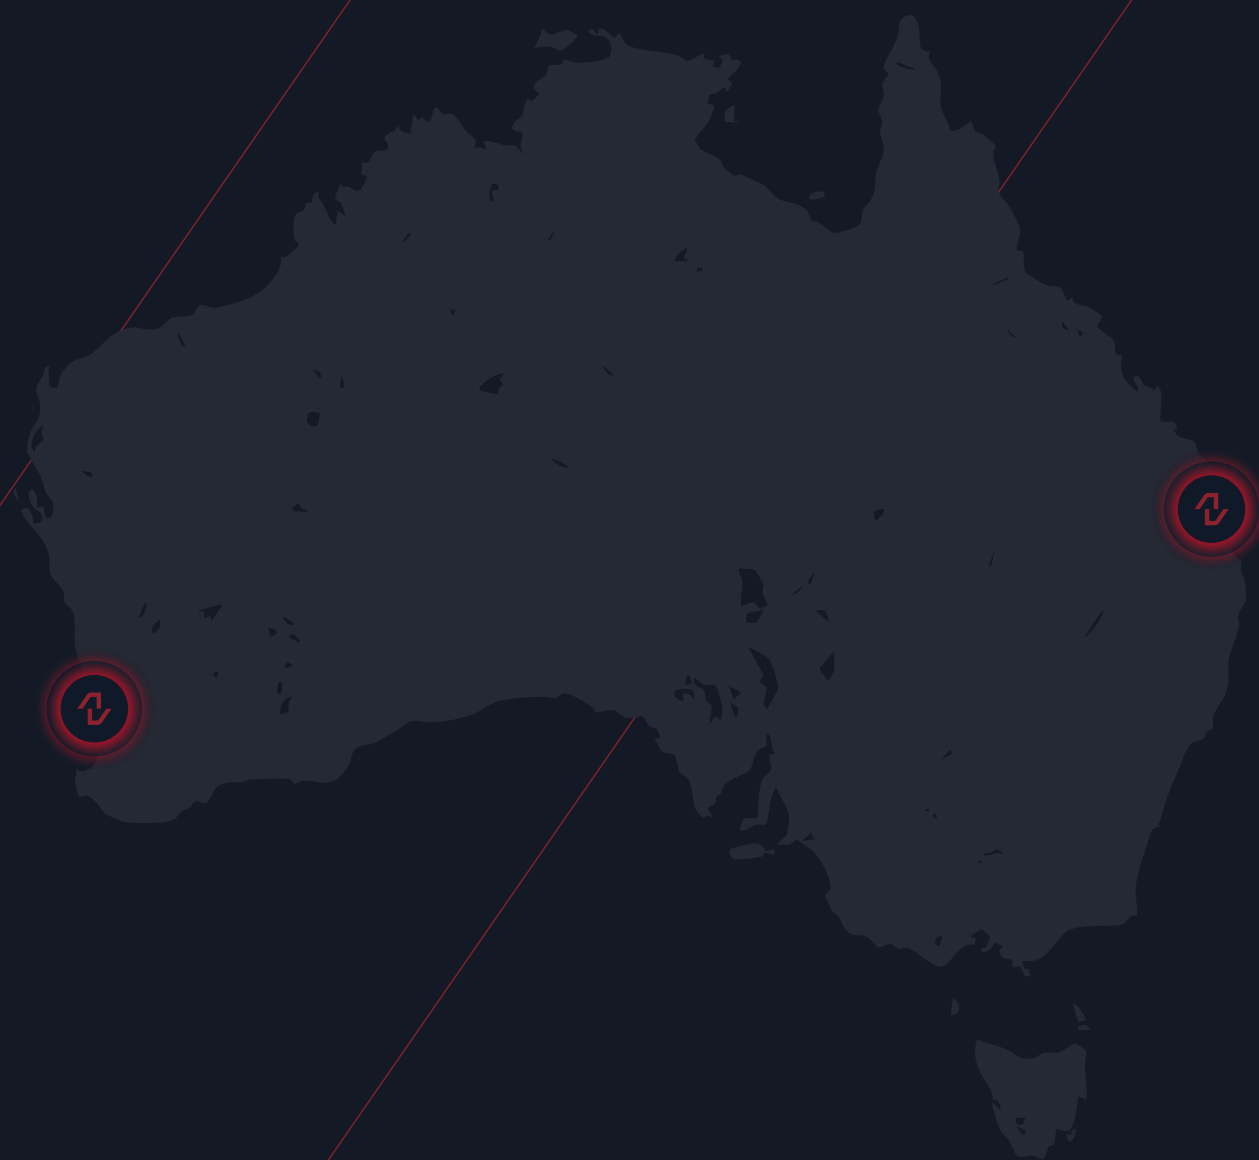

Built for on-site cutting & fabrication, the Mach 1 helps crews work faster with less rework.

Using Point-to-Point trace technology and CNC functionality, the system can duplicate OEM parts, prepare damaged areas for welding and fabricate custom wear packages, gussets, pad eyes and more. It is also ideal for bucket and attachment rebuilds, helping streamline repairs and minimise downtime on site.
